About Us

Kanverse.ai is headquartered in San Jose, California, with U.S. offices in Philadelphia and Los Angeles.

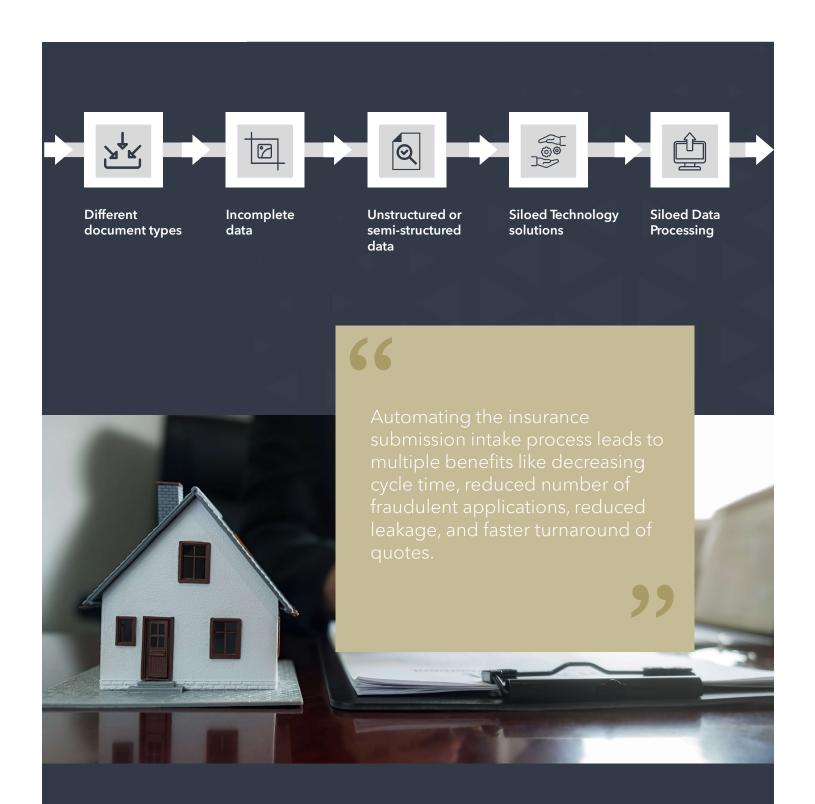

Zero-Touch Insurance Submission Processing

Other Submission intake pain points

Automated data extraction & processing enhances data quality that underwriters receive, which in turn:

Predict risk modeling with increased accuracy

Efficiently determining competitive pricing

Meaningful customer segmentations

Kanverse Hyperautomation platform for Insurance digitizes forms & document processing for Insurers

It intelligently classifies, captures, and extracts all data from forms entering the workflow with up to 99.5% accuracy. Validated and verified data is automatically published to downstream business applications. It organizes the information based on business needs. The raw data is sanitized and cleansed by the system during processing. Kanverse combines multiple Al technologies with automation to make business processes more resilient and mitigate risks.

Business benefits for enterprise

Reduced process cycle time

Efficient Risk Management

Automated Data Validation

Automated Data Validation Determine risk and prevent fraud

Improved straightthrough processing rates

Leverage transformational power of multiple AI technologies

Build strategic partnerships with agents

Generate intelligent analytics

Low code automation

Holistic process view and monitoring

Learn More from Kanverse E-Book (Building Zerotouch Insurance Form Submission Process) that deep dives into how organizations can transform the insurance form submission process with the

combination of AI and automation, save costs, drive productivity, fuse resilience and agility, build nimble process flows, and enhance collaboration between teams.
